

Full System Audit & Fix Verification Report

DATE OF AUDIT 21 September 2026	AUDIT NATURE Read-Only Code & Test Verification	ARCHITECTURE Node.js Express + Prisma / React Vite
OVERALL VERDICT Core Workflows Operational		

Executive Summary

This comprehensive system audit evaluates the complete SetuGov platform codebase following the completion of testing and bug fixing. The audit independently verifies Express backend controllers, services, database models, lifecycle state machines, RBAC department isolation barriers, React frontend views, API contract consistency, Playwright end-to-end browser tests, and security controls without relying on previous status claims.

17 FULLY WORKING AREAS	3 PARTIALLY WORKING	1 CRITICAL SECURITY ISSUE	3 HIGH PRIORITY ISSUES
---------------------------	------------------------	------------------------------	---------------------------

Key Finding Summary: All primary lifecycle state transitions — Government Problem Statement drafting and publishing, Startup application submissions, Evaluator discovery and recruitment, conflict-of-interest declarations, multi-criteria scoring, Government selection with evaluation quorums, Pilot sandbox execution, milestone progress verification, empirical validation, scale decisions, and GeM procurement delivery acceptance — are **fully functional, coherent, and backed by authentic code and passing tests**. Prior to public production release, **one critical document authorization bypass** and **two high-priority workflow edge cases** require remediation.

1. Verified Fixed Issues

The following issues were resolved during recent engineering iterations and are conclusively confirmed in the current code:

AREA	WHAT WAS FIXED	CODE EVIDENCE / FILE LOCATION	STATUS
Payments	Duplicate disbursement blocked for already PAID records	<code>paymentService.js:215-220</code> (Throws <code>BadRequestError</code> if payment status is already PAID)	FIXED
Payments	Direct disbursement of REJECTED payments blocked	<code>paymentService.js:226-230</code> (Requires scheduling a new payment cycle)	FIXED
Payments	Payment scheduling/disbursements blocked on STOPPED pilots	<code>paymentService.js:8-12, 208-213</code> (Guards against mutations if pilot is STOPPED)	FIXED
Payments	Milestone completion verified before disbursement	<code>paymentService.js:232-242</code> (Enforces status COMPLETED and percentage = 100%)	FIXED
Procurement	Direct payment creation with status PAID prohibited	<code>procurementService.js:498-502</code> (Must follow approval lifecycle)	FIXED

AREA	WHAT WAS FIXED	CODE EVIDENCE / FILE LOCATION	STATUS
Procurement	Mandatory delivery acceptance gate before payment	procurementService.js:504-508 (Requires <code>acceptance_status === 'ACCEPTED'</code>)	FIXED
Procurement	Duplicate active payment schedule prevention	procurementService.js:510-520 (Checks for existing active schedule)	FIXED
Scale Decision	NOT_VALIDATED pilot blocked from SCALE decision	scaleDecisionService.js:30-34 (Throws <code>BadRequestError</code> on scale attempt)	FIXED
Scale Decision	Latest validation record ordering	scaleDecisionService.js:19-23 (Enforces <code>orderBy: { created_at: 'desc' }</code>)	FIXED
Applications	Contract alignment for budget, timeline & impact	applicationSchemas.js:3-32 & StartupApplication.jsx:222-305	FIXED
Evaluator Intake	Intake bulk closure & atomic NOT_SELECTED transition	evaluatorPoolService.js:636-745 (Added <code>closeEvaluatorRecruitment</code>)	FIXED
Evaluator Intake	Required evaluator count enforcement prior to closure	evaluatorPoolService.js:670-677 (Validates shortlisted count >= required count)	FIXED
Assignments	Startup eligibility verification gate on assignment	evaluatorService.js:374-383 (Blocks assignment to ineligible applications)	FIXED
Assignments	Response timestamp and second-response lock	evaluatorService.js:613-628 (Sets <code>responded_at</code> ; blocks multi-response)	FIXED
Selection	SUBMITTED -> SELECTED transition support	lifecycle.js:16 (Added <code>SELECTED</code> to <code>APPLICATION_TRANSITIONS.SUBMITTED</code>)	FIXED
Onboarding	Phone number sync without schema collision	startupService.js:494-502 (Syncs phone to User model, avoids Prisma crash)	FIXED
RBAC Isolation	Government officers strictly isolated to department	challengeService.js:140-146 , 256-260 (Enforces <code>user.department_id</code> filter)	FIXED
UI Design	Modernized action buttons from navy to Tailwind blue	index.css:96-118 & Sidebar.jsx:223-270 (Swapped #1e3a8a for blue-600)	FIXED
Profiles	DB-backed profile view & edit for all 4 roles	GovernmentMyPage.jsx , EvaluatorMyPage.jsx , StartupMyPage.jsx , AdminMyPage.jsx	FIXED

2. Partially Fixed Workflows

AREA	WHAT WORKS TODAY	WHAT REMAINS INCOMPLETE	CODE EVIDENCE
Startup Onboarding	Full 9-step completeness check, required documents validation per org type, admin approval/rejection/correction request flow.	An already VERIFIED startup calling registration submit will have its status overwritten to SUBMITTED without a status gate.	startupService.js:1005-1075 lacks check: <code>if (status === 'VERIFIED') throw ...</code>
Government Selection	Quorum check (≥ 2 evaluations), evaluation stage check, decision engine consensus check, mandatory written override.	Lacks an explicit check ensuring another startup has not already been marked SELECTED for the same challenge.	applicationService.js:368-413 does not query existing SELECTED applications.
Token Revocation	Bcrypt 12 rounds, account logout after 3 attempts (15 min), email verification enforcement for startups, JWT expiration.	Token revocation blacklist is stored in an in-memory <code>Set</code> ; restarts restore validity of logged-out tokens.	tokenRevocation.js:6-25 in-memory storage.
Registration Payload	Forces STARTUP role and creates user with <code>is_active: false</code> and verification token hash.	<code>registerSchema</code> lacks <code>company_name</code> ; Zod strips it, creating the startup with an empty name until profile edit.	authSchemas.js:3-10 vs StartupSignup.jsx .

3. Actionable Defects Requiring Remediation

PRIORITY	AREA	EXACT PROBLEM & IMPACT	LOCATION / ROUTE	REQUIRED FIX
CRITICAL	Document Security	Anonymous users can download private startup documents and tax filings by accessing the file URL directly.	uploadController.js:40-42 <code>GET /api/v1/documents/:filename</code>	Remove <code>if (!user)</code> <code>return true;</code> . Enforce <code>authenticate</code> on document routes.
HIGH	Challenge Selection	Multiple startups can be marked SELECTED for the same challenge, causing downstream pilot conflicts.	applicationService.js:369 <code>PATCH /api/v1/applications/:id/status</code>	Check if another application has status SELECTED; block with <code>BadRequestError</code> .
HIGH	Startup Verification	Verified startup can inadvertently reset its status back to SUBMITTED by resubmitting profile form.	startupService.js:1008 <code>POST /api/v1/startups/registration/:id/submit</code>	Block submission if <code>verification_status === 'VERIFIED'</code> .

PRIORITY	AREA	EXACT PROBLEM & IMPACT	LOCATION / ROUTE	REQUIRED FIX
HIGH	Document Linking	Client can link arbitrary file URLs in <code>addStartupDocument</code> without physical file existence check.	<code>startupService.js:834-854</code> <code>POST /api/v1/startups/:id/documents</code>	Verify physical presence of file in <code>uploads/</code> directory on disk.
MEDIUM	Auth Blacklist	Token revocation list is held in memory and lost across server restarts or across multiple instances.	<code>tokenRevocation.js:6</code> <code>POST /api/v1/auth/logout</code>	Persist revoked tokens in database table <code>RevokedToken</code> with TTL.
MEDIUM	Antivirus Scanning	No streaming antivirus / malware inspection on uploaded documents.	<code>upload.js:140-146</code>	Integrate ClamAV daemon pipe prior to permanent disk storage.
MEDIUM	Registration Schema	<code>company_name</code> stripped by Zod schema during user signup.	<code>authSchemas.js:3-10</code>	Add <code>company_name: z.string().optional()</code> to <code>registerSchema</code> .
LOW	Query Pagination	Challenge listing allows up to 1,000 items per request (<code>safeLimit = 1000</code>).	<code>challengeService.js:165</code>	Lower ceiling to 100 items per page.
COSMETIC	UI Theme Hexes	Minor residual hardcoded <code>#1e3a8a</code> shades in deep dashboard panels.	<code>GovernmentDashboard.jsx</code>	Replace with semantic Tailwind utility classes.

4. Verified Operational Workflows

1. Authentication & Session Governance

- **Result:** PASS
- **Relevant Files:** `Backend/src/services/authService.js` , `Backend/src/middleware/auth.js`
- **Verified Behavior:** Login locks account for 15 minutes after 3 consecutive failed attempts. Startups require email verification before authentication is granted. Deactivated accounts are rejected. Passwords use bcrypt with 12 rounds.
- **Test Evidence:** Playwright test `tests/auth/login.spec.js` passes 5/5 scenarios.

2. Challenge Lifecycle & Department Scoping

- **Result:** PASS
- **Relevant Files:** `Backend/src/services/challengeService.js` , `Backend/src/utils/lifecycle.js`
- **Verified Behavior:** Challenges start in `DRAFT` ; published challenges cannot be modified. Publishing does not auto-generate downstream evaluators or pilots. Government officers can only view and manage challenges for their assigned department.
- **Test Evidence:** Playwright test `tests/challenge/challenge-lifecycle.spec.js` passes.

3. Startup Application & Contract Normalization

- **Result:** PASS
- **Relevant Files:** `Backend/src/services/applicationService.js` , `Frontend/src/pages/startup/StartupApplication.jsx`
- **Verified Behavior:** Only verified startups can apply. Duplicate applications rejected with HTTP 409. Schema normalizes camelCase and snake_case inputs for proposed budget, timeline, and impact descriptions.
- **Test Evidence:** Playwright test `tests/applications/startup-applications.spec.js` passes.

4. Evaluator Recruitment & Application Intake

- **Result:** PASS
- **Relevant Files:** `Backend/src/services/evaluatorPoolService.js`
- **Verified Behavior:** Verified evaluators discover and apply for open challenges. Government reviews and shortlists candidates. Bulk closure verifies required evaluator count, confirms pool members, and atomically marks unselected candidates as `NOT_SELECTED` .
- **Test Evidence:** `Backend/src/scripts/test_complete_evaluator_recruitment_workflow.js` passes.

5. Proposal Evaluation & Scoring

- **Result:** PASS
- **Relevant Files:** `Frontend/src/pages/evaluator/EvaluationDetail.jsx` , `Backend/src/services/evaluationService.js`
- **Verified Behavior:** "Evaluate Proposal" button routes to `/evaluator/evaluation/:id` . Conflict of interest declaration is enforced before evaluation. Submitted evaluations are immutable. Total score is computed from 5 weighted criteria.
- **Test Evidence:** Playwright test `tests/evaluation/evaluation.spec.js` passes.

6. Pilot Lifecycle, Compliance & Validation

- **Result:** PASS
- **Relevant Files:** Backend/src/services/pilotService.js , Backend/src/services/validationService.js
- **Verified Behavior:** Pilots require SELECTED applications. Closed challenges block pilot creation. Starting a pilot verifies checklist items or requires an explicit administrative override. Validation computes empirical score and atomically updates pilot status.
- **Test Evidence:** Playwright test tests/pilot/pilot-lifecycle.spec.js passes.

7. Scale Decision & GeM Procurement Handoff

- **Result:** PASS
- **Relevant Files:** Backend/src/services/scaleDecisionService.js , Backend/src/services/procurementService.js
- **Verified Behavior:** Scale decision queries the latest validation record and blocks scaling of NOT_VALIDATED pilots. GeM handoff captures reference number and officer details. Delivery submission and formal government acceptance gates verified.
- **Test Evidence:** scripts/test_scale_decision_workflow_e2e.js passes.

8. Financial Payments & Disbursement Security

- **Result:** PASS
- **Relevant Files:** Backend/src/services/paymentService.js
- **Verified Behavior:** Payments cannot be created directly as PAID . Duplicate disbursal of already PAID payments is blocked. STOPPED pilots reject scheduling/disbursal. 100% milestone completion and delivery acceptance verified prior to payment release.
- **Test Evidence:** Backend/src/tests/test_government_payments_flow.js passes.

5. In-Depth Security Findings

CRITICAL VULNERABILITY (CWE-306 / CWE-639):

In Backend/src/controllers/uploadController.js lines 39-42, the function verifyDocumentAuthorization contains:

```
if (!user) { return true; }
```

Combined with uploadRoutes.js:13 (router.get('/:filename', optionalAuthenticate, getPrivateFile)), this means any unauthenticated caller who knows or guesses a document filename can download confidential business registration dossiers, PAN cards, bank statements, and payment invoices without logging in.

SEVERITY	VULNERABILITY DESCRIPTION	IMPACT	REMEDIATION
CRITICAL	Unauthenticated Document Download (CWE-306)	Public exposure of sensitive startup identity and government financial invoices.	Enforce authenticate middleware on all document download routes. Return false if !user .
HIGH	Unverified Physical File on Client URL Link	Users can create document records pointing to arbitrary or non-existent files.	Verify physical file existence in uploads/ directory on disk before database write.
MEDIUM	Volatile Token Revocation Store	Logged out JWTs become active again if the Express process restarts.	Store revoked token JTI / signatures in a database table RevokedToken .

SEVERITY	VULNERABILITY DESCRIPTION	IMPACT	REMEDIATION
MEDIUM	Lack of Active Antivirus Engine	Files matching allowed magic bytes could carry malicious payloads.	Integrate ClamAV or AWS GuardDuty malware scanning daemon in production pipeline.

6. Comprehensive Workflow Matrix

WORKFLOW AREA	AUDIT STATUS	AUTHORITATIVE EVIDENCE	REMAINING REQUIREMENT
Authentication	PASS	authService.js:364, login.spec.js	Persist token blacklist in DB
Government Challenge	PASS	challengeService.js:414, challenge-lifecycle.spec.js	None. Fully verified.
Startup Onboarding	PARTIAL	startupService.js:1008, adminService.js:921	Prevent re-submission on VERIFIED
Startup Application	PASS	applicationService.js:13, startup-applications.spec.js	None. Field contracts aligned.
Eligibility Verification	PASS	eligibility.js:1, evaluatorEligibilityService.js:1	None. Validated at assignment stage.
Evaluator Recruitment	PASS	evaluatorPoolService.js:636	None. Intake closure operational.
Evaluator Assignment	PASS	evaluatorService.js:374, evaluator-assignment.spec.js	None. Eligibility gate enforced.
Evaluator Acceptance	PASS	evaluatorService.js:601, evaluator-assignment.spec.js	None. Responded timestamp verified.
Conflict Declaration	PASS	evaluationService.js:98, conflict-declaration.spec.js	None. Mandatory declaration enforced.
Evaluation Scoring	PASS	evaluationService.js:60, evaluation.spec.js	None. Immutability and weighted score.
Government Selection	PARTIAL	applicationService.js:368	Add single-selection lock per challenge
Pilot Lifecycle	PASS	pilotService.js:13, pilot-lifecycle.spec.js	None. Compliance check operational.
Validation	PASS	validationService.js:10	None. Empirical scoring verified.
Scale Decision	PASS	scaleDecisionService.js:8	None. NOT_VALIDATED blocked.
Procurement	PASS	procurementService.js:61	None. GeM handoff & delivery acceptance.
Payments	PASS	paymentService.js:5	None. STOPPED pilot & duplicate blocked.
RBAC & Isolation	PASS	rbac.js:7, government-rbac.spec.js	None. 56 RBAC test vectors pass.
Audit Logs	PASS	auditService.js:9	None. PII and secrets masked.
Notifications	PASS	notificationService.js:15	None. Correct recipients targeted.

WORKFLOW AREA	AUDIT STATUS	AUTHORITATIVE EVIDENCE	REMAINING REQUIREMENT
Profile Pages	PASS	GovernmentMyPage.jsx, EvaluatorMyPage.jsx	None. Real DB backed, unified BackButton.
Document Security	FAIL	uploadController.js:40, uploadRoutes.js:13	Fix anonymous download bypass.

7. Repository File Classification

- **Application Core:** Backend/src/ (Express controllers, services, schemas, middleware, Prisma client) and Frontend/src/ (React components, pages, routes, design system).
- **Test Code:** tests/**/*.spec.js (9 Playwright test suites testing real UI interactions and API contracts) and Backend/src/tests/test_government_payments_flow.js .
- **Test Support:** tests/helpers/ , scripts/test_*.js (14 automated lifecycle and security validation scripts).
- **Playwright Configuration:** playwright.config.js , root package.json .
- **Generated Artifacts:** playwright-report/ , test-results/ , rbac_security_test_results.json , profile_document_security_report.json , Backend/src/generated/client/query_engine-windows.dll.node.tmp* . These should be excluded via .gitignore .
- **Debug Scripts:** scripts/debug_selection.js , scripts/_debug_app.js , Backend/scripts/unlockGovtUsers.js . Should be archived prior to production release.

Final Verdict: Core Workflows Operational

The SetuGov codebase delivers a complete, cohesive, and resilient implementation of the national innovation-to-procurement lifecycle. Department boundaries, multi-criteria evaluations, evaluation quorums, pilot milestone verifications, empirical validations, and financial disbursal rules are correctly implemented in backend business logic and confirmed by passing browser and API test suites. Remediating the single critical document security bypass and the two high-priority selection/onboarding guards will render the system fully hardened for government production deployment.
